Career objective

Experienced Java developer adept in all stages of the web development. Knowledgeable in development, databases, user interface, testing, debugging and maintenance of the project. Possess coding and testing skills to deliver client/business-specific programs.

Seeking for a job in a esteem organization that has technologies including Java, Spring boot, Oracle and MySQL. Able to effectively self-manage during independent projects, as well as collaborate as a part of a productive team.

Work Experience

Mar 2023 - Present

ITgma - Java software engineer

Working on a Government system for the country inspectorates. Took part in the scheduled development meeting to recommend relevant system modifications and project improvements. Analyzed project's flow, data usage, and work processes, and investigated problem areas. Planned, tracked, and developed code on short-term sprints and long-term software deployments. Developed and maintained database security policies and procedures. Created and maintained database schemas, tables, views, and stored procedures.

Make and executed unit test procedures and doing performance testings with jMeter, to ensure code changes meet requirements and specifications.

Creating detailed documentation, unit test plans, and well-documented code that was used in the trainings that the business analysts were scheduling with the clients.

Jun 2020 - Feb 2023

Aradiom - Java developer

E-learning web platform for subjects- Development and maintenance of a platform for booking and taking web classes for different subjects, testing the written code, pushing the code on Git, doing code reviews, daily meetings with the team and the clients, participation in representing the company on job fairs and community events. Collaborate closely with the management, team, and the clients to guarantee the full functionality and performance of the website subjects, financial transactions and database management applications. Developed and implemented efficient database backup strategies and disaster recovery plans. Assisted in troubleshooting and resolving database errors, performance issues, and data replication issues. Monitored database performance and capacity, taking proactive steps to increase efficiency.

Involved in all phases of the development process for the application, from conceptualization and design to progress and deployment.

Sep 2018 - Jun 2020

Scalefocus - Java developer

Project for business investment - Provided expert support in developing and implementing effective technical solutions that enhanced the system's performance and subsequently boosted business efficiency.

Took part in the scheduled development meeting to recommend relevant system modifications and project improvements. Spearheaded the software product definition, requirements, analysis, and implementation for the new project designs. Providing support of the system to the clients.
