As an 6-years developer, I worked as a web developer at a startup and as a web manager.

I was mainly in charge of web service development and, if necessary, also played the role of Website administrator.

At first, I joined a small team and developed, and with that experience, I had the experience of taking responsibility and manage an e-commerce site.

I like to contribute to business growth and is particularly focused on e-commerce and corporate management topics.

Also, for big projects, I have actively communicated and collaborated with team members in various positions.

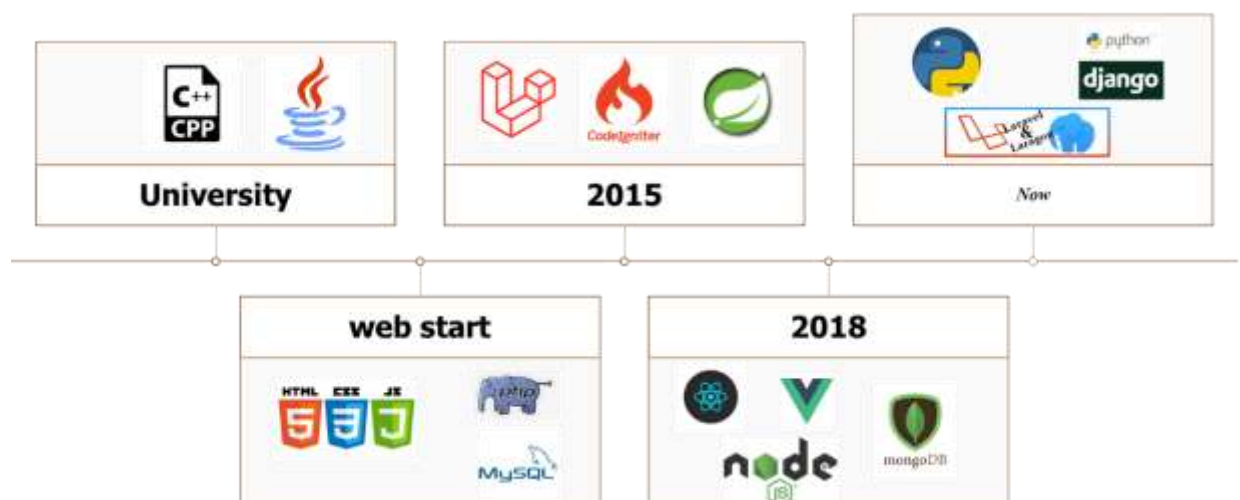

I try to keep repetitive logic modular and standard code style.

Based on understanding business logic, we have experience in designing and building our own flows and improving inefficient processes.

Payment Integrate and Web Socket Expert.

Currently, I am interested in AWS like s3, cognito, dynamic, document DB, real time support function, and learning them.
