EXPERIENCE

Sep 2022 - Present

FRONTEND DEVELOPER, ALTERSET

Worked on two different projects:

The project I'm currently working on represents a very popular news platform. Different kinds of articles, such as live articles, event articles, articles with images or videos, are divided into different topics and subtopics. There is a possibility to sign up for receiving newsletters, to share the article to social media and to navigate to different topics from pills menu as well as hamburger menu. The project is written in React Typescript, it's using internal CMS, feature toggling solution for displaying different themes and features and React Styled components for styling.

Technologies used: React.js, Typescript, Redux, React Styled Components, Jest with React testing library.

The second project represents an employment platform which allows candidates to search for companies as well as employers to find suitable candidates. The application has many functionalities that facilitate the recruitment process for employers, from searching for candidates according to various criteria, scheduling and conducting interviews, correspondence through chat, conducting various types of testing to sending offers and final placements.

Technologies used: React.js, Typescript, Redux, Redux Saga, SCSS, React Router, React Formik, Material-UI, Storybook

March 2021 – Sep 2022

FRONTEND DEVELOPER, Vega IT

Worked on the frontend part of various projects, using both ReactJS and Vue.js. My day-to-day tasks included fetching and sending data to the API-s, using REST, state management through Redux or Vuex, styling with scss and styled components. Used Git and scrum methodology for all projects. Wrote tests in Jest with React Testing Library on one of the projects. Some of the projects I worked on:

- App for scheduling different kinds of events, with a large number of use cases and detailed design solution
- App for searching and making reservations for student accommodation

Technologies used: React.js, Typescript, Redux, Next.js, Vue.js, Nuxt.js, SCSS, React Styled Components, ReactRouter, ReactFormik

Oct 2020 - Feb 2021

FRONTEND DEVELOPER, Muehlbauer Technologies

The project was used for collecting personal and biometric data for ID card, passport and visa production. App was using ReactJs with Redux on frontend and Java on backend, connected through Rest.

Technologies used: JavaScript, ReactJS, CSS, Rest

EDUCATION

OCTOBER 2016 – JUNE 2017

MASTER'S DEGREE FACULTY OF EDUCATION, UNIVERSITY OF BELGRADE

OCTOBER 2012 – JUNE 2016

BACHELOR DEGREE, FACULTY OF EDUCATION, UNIVERSITY OF BELGRADE

SKILLS

- JavaScript
- ReactJS
- MUI
- Typescript
- React
- Storybook
- Jest
- React Testing library
- Redux/Context
- React Router
- Redux Thunk
- Redux Saga
- React Formik
- React Styled components
- REST
- GIT
