POSITION Software Engineer

WORK EXPERIENCE

10/2021–Present Senior Software Engineer

Devsy/Quantox, Skopje (Macedonia)

Graduateland/Jobteaser is the biggest job ad platform in Scandinavia for students and recent graduates.

- Develop new features and maintain the server-side web-based application in Symfony using well written and engineered code using PSR-12 standard. Used PHPUnit and selenium webdriver in phpunit for server and client side testing. Redis, memcached and elasticsearch for caching and free text search.
- Created two gRPC microservices using go and protoc plugin for generating client and server side protocol buffers. Used the build in “testing” package for automated package testing.
- Used github actions for CI/CD
- Created front-end templates using blade and javascript, scss(bem methodology) and html
- Contribute to the design of new features of the platform
- Refactor existing code to improve performance, readability, maintainability and scalability
- Regular sprint-cycle and related activities such as daily stand-up, design sessions, sprint planning, sprint retrospectives, code reviews etc.
- Daily urgent product support

01/2021–09/2022 Senior Software Engineer

Shortlister, Chicago (USA)

Myshortlister is the largest HR benefits database and RFP platform for effortlessly researching, comparing and selecting vendors.

- Developing new features, optimizing and refactoring already existing code in Kohana with well written and engineered code using the PSR-2 standard.
- Contributed to the the design of new features and created the client side using parent/child theme using bedrock wordpress boilerplate and sage starter theme(blade templating, yarn packet manager, less css, bootstrap).
- Used varnish for caching static pages
- Dockerizing existing/new projects
- Migrated the projects from svn to git

09/2018–10/2021 Full Stack PHP developer

Symphony Solutions, Skopje (Macedonia)

Blexr is an affiliate marketing agency in the iGaming, sports betting and forex industry.

- Developing new features, code reviewing, optimizing and refactoring already existing code in Laravel & Vue.js environment with clean and well written code using PSR-2 standard.
- Used PHPUnit and selenium for server and client side testing.
- Creating PHPUnit test in Laravel environment.
- Redis and Varnish for in memory storage and page caching

- Regular sprint cycle with daily stand ups, retrospective, sprint planning, estimations, design sessions, peer programming.
- Created parent/child theme using bedrock wordpress boilerplate and sage starter theme (blade templating, yarn packet manager, less css, bootstrap) for fast generating websites.
- Implementing Express.js for generating pages based on widgets with data coming from external API responses.
- Developing widgets based on the Pugjs templating engine in webpack, Node.js environment.
