Web Locator

(GitHub Repository)
Developed a web application for detailed IP address and domain information.

Core Features: Implemented search functionality for users to retrieve data such as location, time zone, ISP, and country code by inputting an IP address or domain.

Technologies Used: Utilized HTML5, CSS (including Font Awesome and Google Fonts), JavaScript, jQuery, Leaflet for interactive maps, and the ipgeolocation.io API for data retrieval.

Performance Optimization: Enhanced application performance and user experience through JavaScript code optimization and adherence to front-end development best practices.

Documentation: Authored thorough documentation to guide and support future contributors.

Project Showcase: Available on GitHub with a live demo showcasing the interactive features.

Chat App CSS Illustration Challenge

(GitHub Repository)
Developed a visually appealing chat application as a solution to a Frontend Mentor challenge.

Design and Animation: Created intricate CSS illustrations and animations to enhance the visual appeal and user engagement.

Technologies Used: Built with semantic HTML5, Tailwind CSS for responsive design, Animate.css for smooth animations, Google Fonts, and Font Awesome icons.

Attention to Detail: Focused on creating a pixel-perfect design that aligns with modern web standards and aesthetics.

Project Showcase: Available on GitHub with a live demo showcasing the interactive features.

Frontend Mentor Challenges

Overview: Successfully completed multiple Frontend Mentor challenges, demonstrating proficiency in front-end development and design.

Notable Projects:

Huddle Landing Page with Curved Sections
([GitHub Repository](#))

Description: Designed a responsive landing page with unique curved sections using HTML and CSS.

Technologies Used: HTML, CSS, Tailwind and responsive design principles.

Project Showcase: Available on GitHub with a live.

Fylo Landing Page with Two Column Layout
([GitHub Repository](#))

Description: Developed a landing page with a two-column layout, ensuring a clean and user-friendly interface.

Technologies Used: HTML, CSS, Bootstrap and responsive design techniques.

Project Showcase: Available on GitHub with a live demo.

Huddle Landing Page with Alternating Feature Blocks
([GitHub Repository](#))

Description: Created a landing page with alternating feature blocks to highlight various aspects of the service.

Technologies Used: HTML, CSS, Bootstrap and responsive design practices.

Project Showcase: Available on GitHub with a live demo.

Clipboard Landing Page
([GitHub Repository](#))

Description: Implemented a landing page for a clipboard application, focusing on a modern and clean design.

Technologies Used: Semantic HTML5, CSS custom properties, CSS Flexbox, CSS Grid, and Bootstrap.

Project Showcase: Available on GitHub with a live.
