WORK EXPERIENCE

Lead Android Developer
Infinity Energy & ITSS

06/2022 - Present   *Skopje, North Macedonia*

Achievements/Tasks

- Android application for buying parking tickets. By creating an account the users are able to register and login in to the application, customizing and easing the process of buying parking tickets . The users are able to multiple license plates for their account so if they have multiple cars they wont need to write separate messages for buying a ticket.
- Android application for monitoring parking zones. This is an application for controllers that monitor the parking areas. Using the app they are able to scan license plates using character recognition to check and see if the owner of the car has bought a parking ticket, and if not report a parking violation from the app.
- Android application for selling parking tickets. This application uses Bluetooth to connect to a POS Thermal printer device to print parking tickets. This application is for customers that don't use an app for buying parking tickets. Depending on which local business has an authorized device thy can go and buy a ticket from there.
- Android application for university students. On the app they can check their calendar and see which classes they have on particular days and at what time the classes will start or end. Receive notifications if changes have been made like if a class has been canceled for the day, or changed to a different time. See the status of their studies, what grades have they got and calculate their GPA.
