Profile

Creative, hard working, ambitious and self-starting Web Developer, building stable websites and apps. Proficient in HTML/CSS/JavaScript/React. Passionate about web technology and computers, not afraid to take responsibility, because I enjoy building client apps and I know that I will do it well and within a reasonable time. Innovative, on top of writing my own software, I enjoy figuring out the best solution to build, deploy, and manage my software's infrastructure...I love the whole package.

Employment History

Freelancer - Taking Courses

OCTOBER 2019 — PRESENT

As a self-starting student, I made a couple of beginner websites that are available on my GitHub profile, and on my portfolio page. Currently, I am finishing at Brainster as a front-end developer where I learn a lot for the industry, also build one project with React and Bootstrap that is also available on GitHub.

At the moment I am building a small e-commerce page for practice also with React and Material UI that I really like, where I am using commercejs.com services as a back-end that I find it very practical.

Salesman, Prospera , Ohrid

JANUARY 2015 — JULY 2019

Working as a salesperson, I learned how to recognize the needs of customers, develop my communication skills, and seeing their consumer experience, I constantly tried to push for better and better products.

I created an invoice template and other documents in Excel, which automatically calculate the price and tax, where I saw the efficiency of technology, automating things, and finding the best solution to the problem.
