SUMMARY

I'm genuinely excited about the possibilities within software engineering and i am committed to continuous improvement in this dynamic field. Proficient in Java and adept at navigating complex problems, I'm always seeking fresh challenges to expand my expertise. Collaborative environments energize me, as I believe in the power of teamwork and effective communication to drive innovation. I am enthusiastic about the prospect of joining your team, where I can contribute my skills and passion to help achieve shared goals and contribute to the company's growth.

EDUCATION

SUGS Nikola Karev

High School
2017-2021

Faculty of Information Sciences and Computer Engineering

Software Engineering and Information Systems
2021 – expected graduation 2025

LANGUAGE

- Native Language Macedonian
- English

SKILLS

- Object Oriented Programming
- Web Development
- Data Structures and Algorithms
- Databases
- Programming Languages (Java, C#, C++)
- Cloud Computing
- Testing and Debugging

PROJECTS

TMovies

- Creating TMovies was a journey fueled by my love for cinema, tmovies is suggestions website, powered by .NET 8 and Microsoft SQ. Leveraging ASP.NET Core MVC and Entity Framework, I orchestrated seamless CRUD operations for managing movie and TV show entries.

- Implemented Dependency Injection for modularity and scalability. Integrated Identity Server for secure user authentication and authorization. Utilized many-to-many relationships for enriched recommendation engine. Crafted a responsive frontend with Bootstrap and enhanced interactivity with jQuery. Simplified content selection with Select2.

- This project showcases my expertise in .NET technologies and commitment to delivering intuitive solutions for user engagement and satisfaction.

Basement

- Combining my passion for mixology with web development skills, I created a mobile-responsive cocktail menu website using HTML, CSS, and JavaScript. This project showcases my ability to design visually appealing interfaces while ensuring smooth navigation for users on their smartphones. It reflects my dedication to crafting engaging digital experiences with intuitive features and captivating aesthetics.

Culturolocator

- This is a team project that I worked on with some of my colleagues at faculty for the course "Software design and architecture". We chose to work on a navigation web application for cultural-historical objects on the territory of our country.
- The back-end of the project is made in .NET Framework using the MVC pattern and for the frontend we used JavaScript and AJAX.
- This was my first team project where me and my colleagues showed strong teamwork and collaboration skills. For this project I worked both on frontend and backend, where my responsability was that everything works fine.
