- ACF Pro, Timber, Twig.php

- Git, Github/Bitbucket

- FTP, Filezilla, website optimization & deployment

- Asana, Toggl

Familiar with:

PHP, MySQL, C#, Windows Forms

About me

My name is Bojan, and I'm 26 years old problem-solving driven front-end developer currently mostly focused on diving deep into React ecosystem, but I'm also eager to "dip my toes" into React Native, and maybe some of many other exciting JS frameworks & libraries such as Vue, Angular, Node, Electron, even MERN stack, that could pave path to my goal of becoming full-stack JavaScript developer. Related to my previous experience, I'm also interested in future development of (headless) WordPress, its inevitable migration to JAMstack, integration with React, Gatsby, WPGraphQl and other technologies... In my work, I'm trying to connect my love for design and my passion for technology. Even at the very beginning of my process of learning and "building" myself as a developer I strived to adopt and use best practices, pay attention to details, and constantly pursue perfection in my work. I'm in a never ending chase of gathering new skills, and sharpening existing ones, and I enjoy working in teams and environments that encourage both innovative approach in building things and personal and team growth.

I humbly consider my greatest virtues to be:
- constant desire to improve, and make progress in tech areas I'm already familiar with, and gain and sharpen new knowledge and skills
- awareness about how much I know and how much I don't know
- detailed, systematic and organized approach to solving problems and work in general
- readiness to take in consideration different opinions and take constructive criticism, to look at things from different angles, open-minded in general
- trying to maintain and impose on myself "think outside the box" mindset, and trying to "stay hungry, stay foolish"

My area of interests are also AR/VR, IoT, Python and 3D printing.

When I'm not learning, coding or researching, I like to spend my time playing basketball and cooking.

Education

present - 2018

Self-learning/development

Process of my self-learning, and forming myself as developer started back in mid 2018. Together with skills and knowledge I gained on my previous work positions, and on ITivity academy, it forms my current skillset. On the section left, you can see those skills listed, as well as contact links to my github and linkedin profiles, and my portfolio with some personal projects I was working on in my spare time.

2019 - 2018

Itivity software academy by Lanaco

During the period from September 2018 to February 2019 I was one of 30 students at academy, between couple hundreds of applicants. During the five months period I spent there, I learned C#, Windows Forms, JavaScript, and web development, and worked on practical projects in those fields, both individual and in teams.

2017 - 2015

University of Banja Luka, Faculty of Economics

During the two years I attended faculty, I gained some valuable knowledge, and high grades in classes such as Statistics, Mathematics, and some other economy and management related classes.

Characteristics/soft skills:

- open-minded, fast learner, tech enthusiast
- communicative, patient, organized, thorough
- critical thinker
- presentational/public speaking skills
- good at self-organising and time managing, experienced in working remotely
- team player/experienced in working in both smaller and larger multicultular teams
- having ability to reflect on a given situation /problem / product from design, technical, and business point of view

Work experience

present - 17.05. 2021

Web developer – freelance engagement
NDA.

01.10. 2020 - 01.08. 2020

Frontend developer – freelance engagement
During this period I was working remotely on a short-term freelance e-commerce website project which used WordPress as backend platform, and modular Vanilla JS component based frontend written in JSX and styled in SCSS.

15.03. 2020 - 15.07. 2019

Frontend developer - AM2 Studio - https://am2studio.hr/
During this 8 month period I was working remote-first as a part of multicultural & multilingual team as a frontend developer responsible for developing frontend for custom created WordPress themes/websites from scratch. Tech stack that I was working with consisted of: HTML, CSS, SCSS(BEM), WordPress (+Gutenberg) & WP REST API, Advanced Custom Fields Pro, Timber, Twig.php, Gulp/Webpack, Vanilla JavaScript(ES6), jQuery, and occasionally integrating 3rd party plugins/libraries. Part of my workflow was also daily use of Git, Bitbucket, Asana, Toggl-like time tracking systems. I have also gained experience with testing and debugging cross-browser and cross-device and configuring & working with administrating WordPress, plugins for optimizing performance, backend plugins such as Contact Form 7, Gravity Forms, MailChimp, QA, website deployment, backup & migrate.

Some of websites I was working on during my time on this position are:
https://ashdowncapital.ca/
https://brera.de/
https://fullcyrcleadv.com/
https://vangoghexhibit.ca/
https://www.outbackteambuilding.com/

10.05. 2019 - 01.04. 2019

Frontend developer – MANIA marketing agency - https://mania.marketing/
During this month and a half period, I was working on this position.
Stack that I used was consisted of HTML, CSS/SCSS, Vanilla JavaScript and jQuery.
