My name is Aleksandar and I am 24 years old. I consider myself as a fast-learner who is highly motivated, highly adaptable, very trustworthy person and someone who loves working with a team. After I finished the Brainster Academy for Web Developers I have learned what single-page applications are and how React is used to create one. Through many monthly projects and weekly challenges I have learned the following concepts: Event-handling, React routing, React component lifecycle, React component communication, State management, React hooks, Axios for HTTP calls and External NPM libraries, also I have learned how to use GIT without making a mess. I am very comfortable using Bootstrap, jQuery and vanilla JavaScript, but I prefer React. Even though I am Frontend developer, I want to expand my knowledge and learn more and more, so I don't want to limit myself only as a React developer in my life.

## WORK EXPERIENCE

**20.05.2021 – Present**

Currently I am working and studying on a project for one local dog company where we developed a system for scheduling appointments for your dog, together with an admin panel as well. I am one of the main Frontend developers and I am building new features and updateing it accordingly. The app is in ReactJS where also we use JavaScript, MaterialUI, TypeScript and Backend connection.
